

American Bacon Boston Felt Company is a world class supplier of felt products, with our oldest facility in operation since 1825. As America's first felt factory, we have the longest history and most experience with felt media, non woven textiles, and custom blends in the industry. All of our felt products are made in USA.

# FLUID TRANSFER & WICKING

- Applied across many industries including medical, engineering, military, and household use. Fluid transfer and wicking systems are essential for moving liquids between parts, through medical testing devices, or even allowing diffusion into the air from liquid form.
- Typical applications include diffusion in commercial and household fragrance devices, transfer of oil inside of an engine, moving fluids across a surface or between parts.
- Used in Plug in Fragrance Devices that delivers fragrance release quickly and consistently. Wicks can be modified and tested for optimum performance with each individual warming unit.
- Our reeds and wicks utilize a continuous fiber design for optimum fragrance diffusion without clogging. Reeds can be pre-filled with fragrance oil, or used as a replacement for traditional reed sticks with household fragrance oil. Custom shaped wicks accommodate various fragrance reservoirs from home décor items to automotive use.
